

SANTIAGO GALLARDO

FULL-STACK WEB DEVELOPER STUDENT

Bilingual software development student focused on web development, UI design, and modern digital solutions. Experienced in building responsive websites, full-stack applications, and managing projects from planning to deployment. Passionate about creating user-friendly experiences and integrating AI tools to improve productivity and workflows.

EDUCATION

Colegio Mexico Nuevo

- Completed Secondary Education
- English - B2 (Upper-Intermediate)

Centro de Enseñanza Técnica Industrial

- Programming and software development skills
- Fundamentals of systems engineering

LANGUAGES

English B2

Español Nativo

TECHNOLOGIES

C#	TypeScript
C++	NestJS
Python	MySQL
HTML5	MongoDB
CSS3	PostgreSQL
React	WordPress
JavaScript	Git & Github

EXPERIENCE

SGRest - Restaurant Management Platform

Designed and developed a real-time restaurant ERP platform to centralize restaurant operations, inventory, staff management, and analytics within a multi-tenant ecosystem.

- Architected the backend using Hexagonal Architecture, Vertical Slicing, and Clean Architecture principles, separating domain, application, and infrastructure layers.
- Implemented real-time synchronization with WebSockets, enabling instant propagation of orders, payments, kitchen events, and inventory updates across concurrent users.
- Developed web and mobile applications with secure authentication, role-based access control, and tenant isolation.
- Integrated external services, deployment pipelines, and cloud infrastructure to support scalability and maintainability.

React · NestJS · PostgreSQL · Prisma · Socket.IO · Expo · Railway

Music Records E-Commerce

Built a full-stack e-commerce platform for vinyl collectors featuring authentication, real-time communication, and administrative tools.

- Designed the backend following Hexagonal Architecture, decoupling business logic from persistence and communication layers.
- Implemented JWT authentication with access and refresh tokens, alongside role-based authorization for customers, operators, and administrators.
- Developed a complete purchase workflow including product catalog, shopping cart, checkout, order management, and transactional inventory updates.
- Built a WebSocket-powered customer support system with automated FAQ matching and session management.

FastAPI · PostgreSQL · HTML · CSS · JavaScript · WebSockets

Corporate Website Project

Developed the corporate website for an industrial manufacturing company, emphasizing accessibility, responsiveness, and professional presentation.

- Designed semantic and responsive interfaces to showcase services, equipment, and company information across desktop and mobile devices.
- Implemented SEO best practices and Open Graph metadata to improve search visibility and social media integration.
- Organized content architecture to enhance navigation and communicate technical information effectively.
- Built reusable styling modules and page-specific layouts to simplify maintenance.

HTML5 · CSS3 · JavaScript · SEO

El Último Miembro - Desktop RPG

Developed a turn-based RPG featuring character progression, combat systems, exploration mechanics, and persistent game state management.

- Engineered interconnected gameplay systems including combat, inventory, NPC interactions, shops, and map exploration using object-oriented design principles.
- Implemented persistence with MySQL hosted on Railway to manage player progress, enemies, items, and world state.
- Developed navigation and pathfinding algorithms alongside modular game logic for combat calculations and event handling.
- Distributed the application as a standalone desktop executable built with .NET 8 and WinForms.

C# · .NET 8 · MySQL · WinForms · Railway
